

## Test Manager / QA Architect

### Position Summary

Inventorum is developing an innovative platform for local retailers to run their day-day business while simultaneously and effortlessly selling through multiple channels of e-commerce such as ebay, Etsy, Dawanda or their own webshop.

We are passionate about equipping small businesses with big business tools so they can better compete and be more profitable. Eventually we want to empower and encourage consumers to shop locally through easy to use search tools. Bottom line: We want small businesses to thrive and grow.

As QA Architect you will report to the CTO and Chief Product Officer and be responsible for the approach and full testing lifecycle of the Inventorum App and related applications. This includes test requirements decomposition, prioritization, architecture assessment, script design, construction, execution, analysis, reporting, and process optimization for defect management. You will also be expected to manage the creation and maintenance of related documentation.

### Responsibilities

- Design the overall application QA approach.
- Provide key business analyst initiatives to help align business goals with IT solutions.
- Identify and document system application/data requirements from application documents.
- Develop and document test scripts for web and mobile devices.
- Manage the monitoring of system performance and resource utilization.
- Manage error identification and documentation.
- Drive the analysis and tuning of system issues.
- Possess a medium to high ability in automated scripting.

### Requirements

- Solid understanding of Computer Science fundamentals (BSc or equivalent degree would be nice).

- Expertise in testing mobile applications for iOS and Android.
- Demonstrate proficiency in programming languages such as C/C++, JavaScript, Perl, SQL.
- Experience as Business Analyst, ideally on B2B systems.
- Demonstrate ability and basic knowledge of database, network, O/S, CRM- and ERP-like relationships and dependencies.
- Ability to quickly recognize key areas for improvement within environments and recognize errors brought forward from a testing environment.
- Experience in Selenium, TestWise, HP Quality Center, TestRail, or similar testing tools.
- Experience in JIRA desired.

### **About Inventorum**

Inventorum is everything a start-up should be. We are led by a Silicon Valley veteran and supported by a German serial entrepreneur. We care about our employees. We are creating a vision-driven killer product and are striving to make our customers happy. We work hard but respect people's lives, expect excellence and encourage personal development.

We reside in a loft in Berlin-Mitte, the new hub for start-ups in one of the best cities in the world. Its history, culture, and quality of life are well-known. Housing is still cheap here, you get a full meal for 5 Euros and for families there are great international schools and day care centers.

We are looking for men and women who are passionate, understand the urgency of start-up setting and take pride in the ownership of their tasks while functioning fully in a team setting.

For this position, Inventorum is looking forward to hearing from applicants with testing and quality assurance experience. Our compensation is competitive in salary and includes all the benefits of German social security. We are an equal opportunity employer and encourage anybody to apply who feels to be up to the challenge.
